XML and Web Applications – I

Sr. No.	Assignment Question
1.	**Utile Yellow Pages** are planning to launch their service in compact disc format. They have their database regarding the information generally desired by the consumers. They need an application, which can export XML data from the database and present them to the consumer. **Imagine yourself to be a programmer and create an application demonstrating generation and transformation of XML data into HTML from a database using JSP.**
2.	A giant retail chain is planning to target the rural consumers this festive season. Their only concern is that there is no connectivity between their distribution center and target rural areas. Their supply chain management division needs data to have an idea about volume of sale. Suppose you are a programmer in their IT division and have been entrusted with job of developing an application, which can accept data in XML. It is also desired that the XML data to be imported into their database. You have to create an application demonstrating import of XML data into database.
